

FLOWCHART

EXPLANATION

Website develop with
Adobe Dreamweaver CC
version 13.2 Built 6466

Naming convention

Every picture is name with the
name of the page and a # flowing
indicating the order of appearance

ex: upcomingevent1.jpg

*section that has a lot of images
have their own folder. The naming
convention still applies.

Folder Structure:

html
css
js
img
board
classes
conferences
gallery
indeximages
studentgroups
plano
design

Master

*the original illustrator file is located
in the plano folder under the design
folder

Typography

Colors

Particularities

The website is using javascript for
the menu. These sheets can be
find in the js folder and they are
name like this :

- classie.js
- demo1.js
- modernizr.custom.js

The index page is using a different
script since it is different. You can
locate them in the same folder has
above and they are name like this:

- parallax.js
- modernizr.custom.86080.js

The index page is the only page on
the website that is not using the
same template has the other ones.
Therefore, it has its own css style
sheet:

- indexstyles.css

The other pages are all using the
same css:

- style3.css
- fluid12-grid.css

* All the design has been created
base on a fluid grid of 12 columns.
The max width has been set for
1200px.

The master pages can be found
in the master folder under those
names:

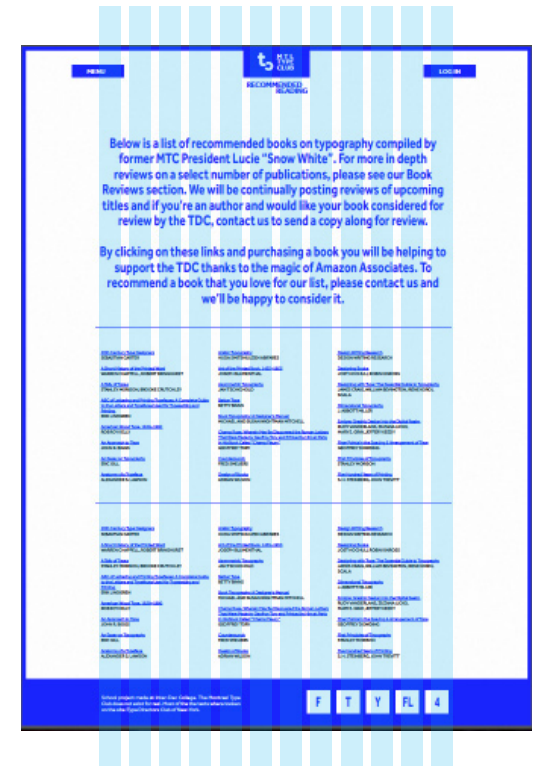

- master.html
- master-gal.html

Exception IE10

A java code is use to talk to IE10
to show the menu. Unfortunately
at this moment the menu doesnt
react exactly how it should but at
least it is fonctionnal.

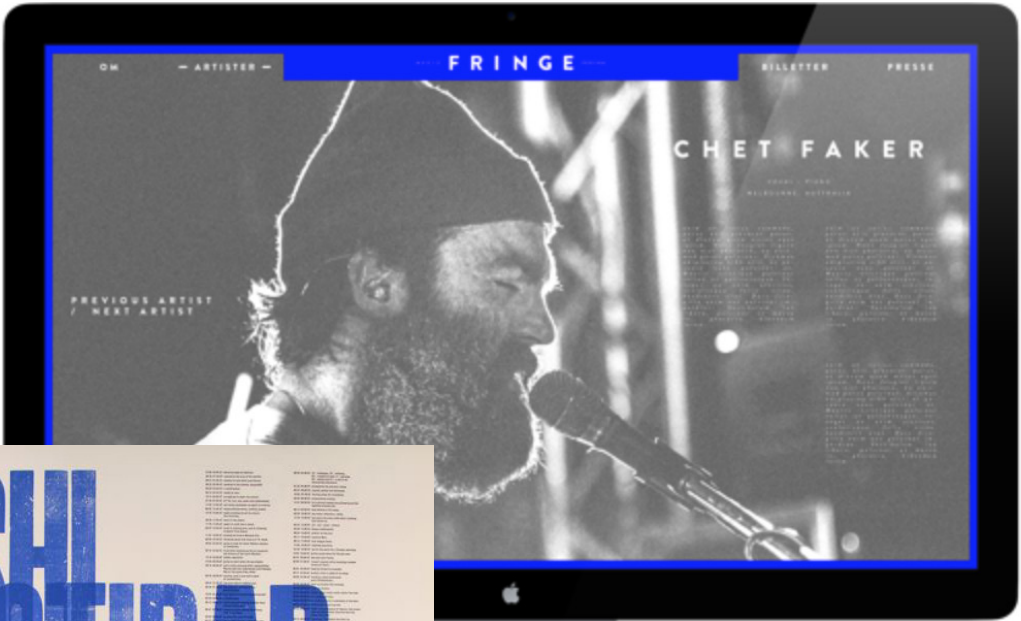

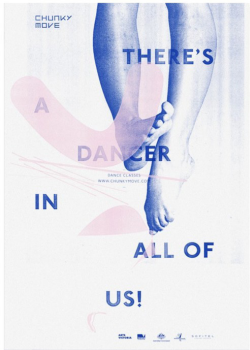

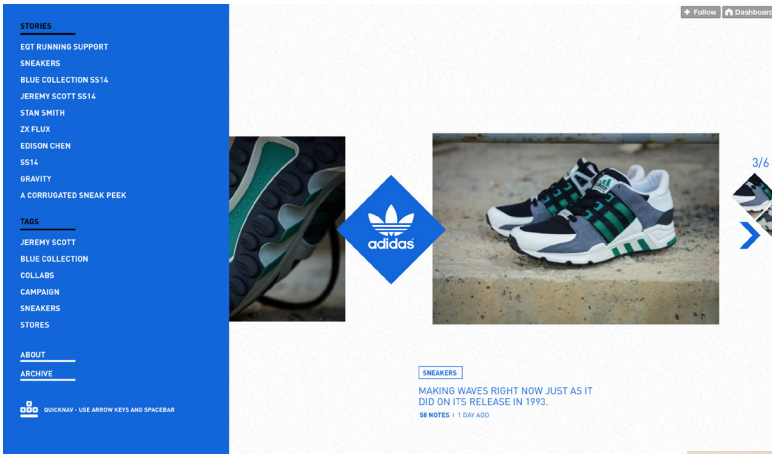

```
<script>  
if (false)  
{  
document.documentElement.  
ClassName+=' ie10 ' ;  
}  
</script>
```

Grid template

// MOODBOARD

Museo is a semi-serif typeface with lucid, open forms and highly original details — especially the pipe-like, bent half-serifs. Museo is great for cool-looking headlines but also very effective in medium-sized texts.
